GREENHOUSE BUYER'S GUIDE

Find the right greenhouse for
your garden with our guide.

1) Type

Whether you're an experienced gardener looking for an upgrade on your existing greenhouse, or you are a novice who would like to have a go at growing your own crops. Our fantastic greenhouses and potting sheds make a wonderful addition to any garden. Included in our range are polycarbonate, wooden and metal greenhouses.

Polycarbonate Greenhouses

The best advantage of a polycarbonate greenhouse is that they provide better insulation than their glass counterparts. Our polycarbonate units have a number of great features which make them ideal greenhouses for your garden.

Harvester Greenhouse

The Harvester is a large greenhouse which features twin-wall polycarbonate glazing. This provides the greenhouse with a regulated temperature and lets natural light stream into the building, whilst protecting plants from harmful UV rays. Rust-free aluminium framing and double, sliding doors allow easy access to the unit. Opening roof vents provide great ventilation.

Rosette Greenhouse

For a smaller build with the same great quality, the Rosette allows you to experience the benefits of a polycarbonate greenhouse, even in a small garden. Sizes range from 4x6 to 10x6 and they have a single sliding door, opening roof vents, UV protection and twin-wall polycarbonate glazing,

Metal Greenhouses

Our metal greenhouses are maintenance free and feature an innovative hybrid glazing. They all come with a galvanised steel base with base anchors included.

5000M Aluminium Greenhouse

Constructed from a rust-resistant aluminium frame, the 5000M is a 10x6 unit which includes twin-wall polycarbonate glazing, UV protection and an opening vent for ventilation.

3000M Aluminium Greenhouse

This 8x6 greenhouse has a silver aluminium frame, an opening air vent and twin-wall polycarbonate glazing. It's also rust resistant metal.

3000S Aluminium Greenhouse

The 3000S is a great starter greenhouse which is rust resistant, compact and lightweight and features hybrid glazing and roof vent.

5000S Aluminium Greenhouse

This 6x6 unit is another compact and lightweight greenhouse which includes an opening air vent, hybrid glazing, and rust resistant frame.

Wooden Greenhouses

We offer a range of attractive wooden greenhouses in a variety of sizes and styles to suit your gardening needs. Our wooden greenhouses use mortise tenon doors which offer easy access to the wooden units and look great too. All our wooden greenhouses are available in sizes 3x6, 6x6, 9x6 and 12x6.

4000 Lincoln Polycarbonate Greenhouse

We offer two versions of this greenhouse, one with an opening roof vent and one without. Each of these greenhouses come with polycarbonate glazing and a solid 11mm T&G frame.

The walls and roof of the greenhouse are designed with polycarbonate glazing to provide plenty of light and heat for plants to grow, as well as protecting them from harmful UV rays.

4000 Lincoln Wooden Wall Greenhouse

This wooden greenhouse is constructed using a solid 11mm T&G frame. Styrene glazing offers light interiors for plants to grow and an opening roof vent is included for regulated temperatures.

2) Access

Consider how you want to access your garden greenhouse and where it will be located. We provide great access features of our greenhouses which make it just that bit easier.

Doors and Windows

Sliding doors as featured on the Harvester and Rosette, provide maximum storage space and take up less room than hinged doors. The Harvester has double sliding doors and a number of our greenhouses are designed with double doors for easy access in and out of the building. The Rosette has a single sliding door which provides more room in the entrance of the building for plants.

We provide polycarbonate and styrene glazing for the windows of our greenhouses. Polycarbonate is a more advanced window glazing as it lets in plenty of light but protects from harmful UV rays. Styrene is a more standard type of glazing which provides plants with enough light to grow well.

Opening Roof Vent

Air vents are a great feature, as they allow a regulated climate within the greenhouse, enabling your plants to grow better, The majority of our greenhouses come with an air vent.

3) Features

There are a number of features and options available with our greenhouses that make them such a fantastic purchase for your garden. From shelving options to a pressure treated bases we have got all your greenhouse needs covered.

Pressure Treated Base

With our wooden greenhouses, we offer the option of a pressure treated base. This provides your greenhouse with a platform that securely anchors the building into the ground. It is pre-treated to resist moisture and also give the unit extra height, providing more headroom.

Shelving Options

To maximise the storage capacity of your greenhouse, we provide simple shelving solutions. The shelving is T&G constructed and is easy to assemble.

Add all round shelving down both sides and along the back wall of your greenhouse. Or you can add shelving to two sides of the build. You can also add one side of shelving. These increase storage potential and are great for placing potted plants or gardening tools.

A green garden shed with a grey roof is situated on a lush green lawn. In the foreground, there are several potted plants, a blue watering can, and a red bucket. A path of dark stepping stones leads towards the shed. The background is filled with tall green trees under a bright blue sky with scattered white clouds.

We hope this helps!
